Results-driven Frontend intern with expertise in building dynamic, cross-browser compatible websites. Skilled in **Reactjs** library

SKILLS

Programing Language: Javascript, Java

Source Code Management : Git

Libraries: ReactJs, Redux, SASS

Database Management Systems: MySQL, MS SQL Server

PROJECTS

Booking Yacht ⧉   **May 2024 - Jul 2024**

- Summary: The online yacht booking website uses the main programming language Java Spring Boot, with the front-end developer in Reactjs and SCSS. The website serves three main actors: Admin, company, and customer. Customers can view yachts, create login accounts, book yachts, and pay online with VnPay. Companies can manage yachts, rooms and services, while admins manage all user and company accounts.
- Technology:
  - Backend: Java, Spring Boot
  - Frontend: Reactjs, React Bootstrap, Redux, SCSS
  - IDE: Visual Studio Code, IntelliJ
- Team size: 5 members
- Responsibilities:
  - Front-end: Develop the user interface allowing the user to view the home page, sign in, sign up, view yachts and manage the company. Decode tokens using jwt-decode and send asynchronous HTTP requests with Axios to REST endpoints. Configure Redux to manage state and Redux Persist to synchronize data. Implement language switching using i18next and draw statistical charts with Recharts.
  - Backend: Implement exporting data in .xlsx format using Apache POI functions.

E-commerce ⧉   **Jun 2024 - Jun 2024**

- Summary: The online e-commerce website uses the ReactJS library, the user interface utilizes React Bootstrap, and data is managed using JSON-server. The website features 2 main actors: Customer and Admin. Customers can view sign-up pages, log in, view products, add products to their cart, and checkout. Admins can manage accounts and products.
- Technology:
  - Reactjs, React boostrap, Redux, Json-server, SCSS
  - IDE: Visual Studio Code
- Team size: 1
- Responsibilities:
  - Create data with JSON-server.
  - Sends asynchronous HTTP queries to a REST API using Axios.
  - Develop front-end with ReactJs, Antd , React-Bootsstrap and Redux.

Food Shop ⧉   **Feb 2024 - Mar 2024**

- Summary: Website shopping food with a simple interface, easy to operate and manage for admins and customers. The website has main functions such as product viewing, registration, login, shopping cart, and payment. Admins can manage products and user accounts.
- Technology:
  - Frontend: JSP
  - Backend: Java Servlets
  - Database: MS SQL Server
  - Server IDE: Apache NetBeans
- Team size: 1
- Responsibilities: This project was entirely developed by me. Responsibilities included: Frontend and backend programming using Java MVC. Database design and management using MS SQL Server. Designing the user interface with JSP

EDUCATION

Not Graduated   **Jan 2021 - Dec 2025**

FPT University   **GPA:** 7.4/10

LANGUAGES

English (Limited working proficiency) • **Japanese** (Limited working proficiency)
